A new edition of this popular single volume survey of the British economy from industrialisation to the present day. This key text has been updated to cover a further decade of Britain's economic and social fortunes. In particular the chapters on the industrial revolution have been extensively revised and there is a new chapter on environmental history. The Industrial Age marshals a wealth of statistical and other evidence, using economic theory to analyse recent British economic change.

This text analyses how technical colleges have responded to the emerging field of further education and training (FET) in South Africa. The data and theories presented are the result of research conducted by the Human Sciences Research Council, including surveys of technical college graduates and employers on their satisfaction with college graduates and institutional profiles of local labor markets. The international case studies of vocational and technical education demonstrate the interrelatedness of education and training systems.

The history of the TLC from its origins in the 1920s to its demise in the 1950s.

Labour focuses on the issues and problems concerning the efficient full employment of labour in a free market economy. The discussion is largely about the conditions (including comparative wages) underlying industrial efficiency and maximum production from various labour resources at least cost. By estimating man-power, analysing the human factor and measuring labour efficiency, the book summarizes recent evidence on employment conditions for or against efficiency and the effect upon the incidence of unemployment.
